

FIELD & CAPTURE GUIDE

Team reference - do not include this page in the photographed form.

Column / validation flag	Form value / source
person_age	Age; completed years for this prototype.
person_gender	Female → female; Male → male.
person_education	High School, Associate, Bachelor, Master, Doctorate (exact strings).
person_income	Annual income; 12 whole-number digits plus 2 decimal digits, in the training data monetary scale.
person_emp_exp	Employment experience; integer years.
person_home_ownership	Rent → RENT; Own → OWN; Mortgage → MORTGAGE; Other → OTHER.
loan_amnt	Requested amount; 12 whole-number digits plus 2 decimal digits, in the same monetary scale as annual income.
loan_intent	Personal → PERSONAL; Education → EDUCATION; Medical → MEDICAL; Business venture → VENTURE; Home improvement → HOMEIMPROVEMENT; Debt consolidation → DEBTCONSOLIDATION.
loan_int_rate	Simulated bank quote; 12.50% becomes 12.5, not 0.125.
loan_percent_income	Computed, not handwritten: $\text{loan_amnt} / \text{person_income}$. Require positive income. Use the same computation and rounding policy during training and prediction.
cb_person_cred_hist_length	Simulated credit record; completed years for this prototype.
credit_score	Simulated credit record; integer score.
previous_loan_defaults_on_file	Simulated credit record; exact strings Yes or No.
loan_status	Target only: uploader defines 1 = approved, 0 = rejected. Never include as an input or ask the applicant to fill it.
name_present	Full name area contains handwriting. Validation only; never a loan-model input.
signature_present	Signature area contains handwriting. Validation only; never a loan-model input.

Capture contract. Align each photograph to the same template using the four corner markers; the extra upper-left dot identifies orientation. Crop box interiors to exclude printed borders. Use LP-01 v3 crop positions, including the new name and signature areas. Printed labels do not require OCR.

Recognition contract. Detect blank digit cells before classifying digits. For each choice group, accept exactly one clear mark. Missing, multiple or uncertain marks require review. Name/signature: any handwriting or scribble passes; no identity or authenticity checks. If empty, request completion and a new whole-page photo; if unclear, request a clearer photo.

Prototype limits. Check that whole-year fields match the cleaned CSV. Bank fields are mock inputs: unknown values require review, never zero-filling. If unavailable in the product, retrain with fewer features. Currency is not assumed to be EGP or USD.

Data source. Ta-wei Lo, Loan Approval Classification Dataset, Kaggle. Source describes 45,000 synthetic records, 14 columns, and SMOTENC generation. Currency is not specified in its metadata.
